Re: Letter of support for Professor Dhiraj Gupta

Dear Members of the Honours Committee,

I am pleased to write in strong support of Professor Dhiraj Gupta's nomination for appointment to the Order of the British Empire. I do so in my capacity as President of the European Heart Rhythm Association (EHRA), and also as a colleague who has had the privilege of knowing and working with Professor Gupta for many years.

Professor Gupta is one of the most respected members of the international electrophysiology community. His reputation rests not only on his clinical excellence, but also on the quality and practical relevance of his scientific work, his commitment to education, and his consistent willingness to contribute to the advancement of our specialty beyond institutional or national boundaries.

Under his leadership, Liverpool has become widely recognised as a leading European centre for electrophysiology research, innovation and clinical training. His group has made important contributions to safer and more effective electrophysiology practice, including work on ultrasound-guided vascular access, ablation index targets, and streamlined approaches to atrial fibrillation ablation. These contributions have influenced practice well beyond the United Kingdom and have helped improve procedural safety, efficiency and patient access.

Professor Gupta has also made substantial contributions to EHRA and ESC educational and scientific activities. He has chaired the EHRA Advanced EP Course in atrial fibrillation, served on scientific programme committees for major European cardiology meetings, and co-authored several important EHRA and ESC documents, including guidance on supraventricular tachycardia, digital devices in arrhythmia management, cardioneuroablation, vascular management for electrophysiology procedures, and transseptal access. These activities have been undertaken in the spirit of service to the profession, without personal financial gain.

What is particularly impressive is that Professor Gupta has extended this same educational commitment to India, where he has spent considerable time training local cardiologists in complex electrophysiology and atrial fibrillation ablation across

multiple centres. This work, undertaken on his own initiative and at his own expense, reflects a rare combination of professional generosity, personal dedication and a genuine desire to improve patient care in settings where advanced electrophysiology training can have a profound and lasting impact.

On a personal note, I have always known Professor Gupta as an esteemed colleague and a true friend: generous with his expertise, humble despite his achievements, and deeply committed to raising standards in electrophysiology wherever he can contribute. He represents the very best values of our profession - excellence, integrity, service and mentorship.

For these reasons, I wholeheartedly endorse Professor Dhiraj Gupta's nomination. I believe that his exceptional contributions to clinical electrophysiology, education and international capacity-building are highly deserving of formal recognition.

Should any further information be required, I would be pleased to provide it.

Yours sincerely,

Professor Helmut Pürerfellner, MD, FEHRA, FESC, FHRS
President, European Heart Rhythm Association (EHRA)
Consultant Cardiologist and Electrophysiologist
Linz, Austria
